Parascript FormsBot.AI

Add the simple-to-use forms processing capability with Parascript FormsBot.AI for Automation Anywhere 360

Imagine adding unstructured forms data to your Automation 360 processes in as little as **5 minutes**. That's all it takes using the Parascript FormsBot.AI, our deep learning-based forms processing bot.

Taking a single sample, anyone can define the specific data they wish to extract using the FormsBot.AI Designer..

Testing and viewing results is just as easy with each form displayed along with the resulting answers — your quality data extracted — right on the image.

There is no need to move back-and-forth. Simply draw and name your fields, test and deploy. That's all there is to it.

Parascript's industry-leading handwriting recognition is included in the FormsBot.AI. There is no need to spend time adding complex parameters, vocabularies or regular expressions.

The software also easily distinguishes between text and handwritten data types; there is no need to determine and define the type beforehand.

If your organization needs to process forms-based data within your Automation 360 workflows, the Parascript FormsBot.AI is your answer.
